

CROWDSTRIKE FALCON PLATFORM

NEXT-GENERATION ENDPOINT PROTECTION

FALCON HOST | FALCON INTELLIGENCE | FALCON DNS

What if you could immediately detect adversary activity and confidently protect your organization from advanced malware and targeted attacks?

CrowdStrike Falcon is the industry's first true SaaS next generation endpoint protection platform, delivering the fastest and most effective detection and prevention of known and unknown threats.

To combat sophisticated attacks, you need sophisticated protection. CrowdStrike Falcon Platform is the answer.

WHAT WILL A FULLY INTEGRATED SAAS ENDPOINT PROTECTION PLATFORM MEAN FOR YOU? REAL-TIME ADVERSARY DETECTION. IMMEDIATE PROTECTION.

100% SAAS ARCHITECTURE

Our easy-to-deploy scalable cloud model drives down cost and complexity for customers by eliminating the need to support, update and maintain multiple on-premise products. The architecture also enables our Advanced Threat Intelligence Cloud and Threat Graph Data Model, which together provide real-time detection and prevention of attacks, protecting customer endpoints from adversaries 24x7.

INDICATOR OF ATTACK (IOA) APPROACH

By focusing on more than malware, which only accounts for 40% of all attacks, we employ an adversary approach that identifies Indicators of Attack (IOAs), not just IOCs that malware-based solutions rely on. Simply put, we deliver greater visibility and more effective detection of - and prevention from - targeted attacks.

INTEGRATED PLATFORM

Our platform integrates the most effective endpoint protection technology available with teams of experts providing Intel and CSOC support and services. The platform also leverages the power of the crowd, correlating billions of events across the entire CrowdStrike community in real time to provide the most effective protection.

CROWDSTRIKE FALCON PLATFORM APPLICATIONS:

CrowdStrike Falcon Platform combines cutting-edge analytics with world-class threat intelligence to deliver the CrowdStrike Falcon product portfolio: Falcon Host, Falcon Intelligence, and Falcon DNS.

» FALCON HOST

Detect and block adversary activity, ultimately preventing damage to your organization through SaaS-based next-generation endpoint protection.

Cloud Scale and Speed

- **Fast & Easy Deployment:** No disruption on the endpoint, no reboot - lightweight sensor <10MB
- **Seamless Updates:** No on-premise equipment required - reducing cost and complexity
- **Complete Protection:** Protects Windows Desktop and Servers, Mac OSX and Linux - even when off the network

Unrivaled Visibility

- Focus on proactive Indicators of Attack (IOA) vs. Indicators of Compromise (IOC) to gain maximum oversight into all adversary activities – reconnaissance, exploitation, privilege, escalation, lateral movement, and exfiltration
- Understand who is attacking you and what they want to steal or damage using powerful search capabilities of the CrowdStrike Advanced Intelligence Cloud
- Easily integrate Falcon Host with existing security architecture and SIEM tools through the CrowdStrike Falcon API

True Prevention

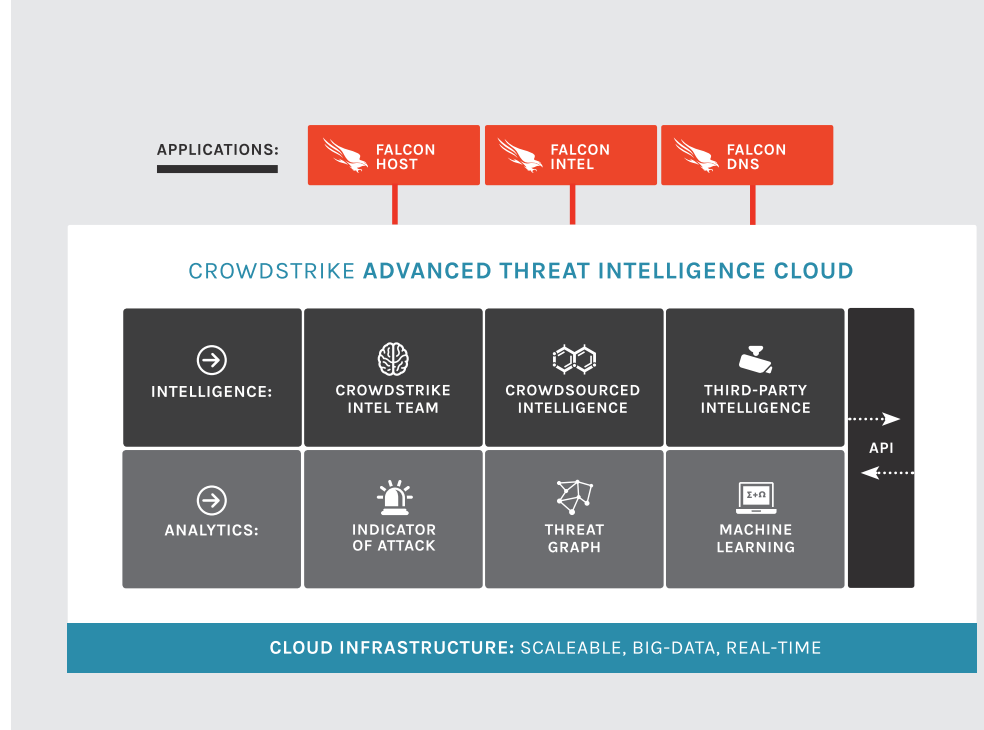

- Block exploits, rendering attacks harmless, regardless of whether the exploit leverages an older unpatched flaw or a zero-day vulnerability
- Block malware more effectively by complementing your existing defenses with multi-vendor AV in the cloud, catching malware that a single AV vendor may miss
- Set up custom blocking, using either whitelisting or blacklisting to provide effective and flexible control over what can or can't run on your endpoints

» FALCON INTELLIGENCE

Develop insights into the tools, tactics, and procedures of 70+ adversary groups with strategic and actionable threat intelligence. Plan for events in future, diagnose incidents more efficiently, and monitor changes to your environment to prevent damage from advanced malware and targeted attacks.

- **Analysis and Reporting:** Detailed technical and strategic analysis of adversaries' capabilities, attack indicators, tradecraft, attribution, and intentions
- **Threat Feeds and API:** Customizable feeds and API support a wide variety of formats with the ability to upload threat samples for detailed analysis
- **Tailored Intelligence:** Tailored intelligence provides visibility into breaking events that matter to your industry, brand, infrastructure, users, and customers

CrowdStrike's Global Intelligence team tracks all adversaries – nation-state,

criminal, hacktivist, and activist – providing you with customized and actionable intelligence reporting as a subscription service.

» FALCON DNS

Securing DNS access to your networks is critical to deploying a comprehensive strategy for your organization. DNS protection, coupled with the power of fully integrated threat intelligence, let's you monitor, log, analyze, and block malicious DNS traffic.

- **Fully Managed:** CrowdStrike Falcon DNS is a fully-managed service maintained by the CrowdStrike Security Operations Center's experienced intrusion analysts – freeing your resources
- **Maximum Privacy:** Gain complete visibility into legitimate and suspicious DNS activity with High Threat Alerts and Weekly Visibility Reports
- **Rapid Deployment:** Get up and running fast. Simply point your DNS resolvers to ours and let us do the work for you
- **Complete Protection:** With no client or server software to install, manage, or crash, you never again have to worry about updates or gaps in DNS coverage

CROWDSTRIKE AS A SERVICE

Combine the cutting-edge power of CrowdStrike Falcon with expert analysis to provide an additional layer of protection. CrowdStrike as a Service delivers around-the-clock insight and intelligence, with

powerful adversary hunting, keeping your business assets safe.

- CrowdStrike as a Service allows you to augment your existing security team's expertise with the CrowdStrike Security Operations Center (CSOC)
- A global 24/7 operation staffed by an elite group of cyber first responders and investigators, CSOC continuously monitors your endpoints and hunts for adversary activity
- Leveraging the power of the full CrowdStrike Falcon Platform, CSOC allows you to detect and combat attacks in real-time – not hours, days, or months

HEAR FROM OUR CUSTOMERS:

"CrowdStrike has revolutionized the way we deliver security. They give us visibility and stop attacks that our traditional defenses completely miss – and they're with us 24/7, day in and day out."

- Pete Murphy; CIO, Cardinal Innovations
